Pompe disease: towards gene correction using targeted nucleases

The research described in this thesis was financially supported by grants from the European Union FP6 program, activity NEST (contract number 015509) and the Jan Kornelis de Cock foundation.

The author gratefully acknowledges the financial support for printing of this thesis by:

Genzyme Europe B.V.

University Medical Center Groningen

Synvolux Therapeutics B.V.

Graduate School for Drug Exploration

University of Groningen

Table of contents

Chapter 1:	Introduction	9
Chapter 2:	Pompe Disease: current state of treatment modalities and animal models	19
Chapter 3:	Delivery of lysosomal enzymes in patient human skin fibroblasts using SAINT-DOPE leads to efficient uptake and sustained release	37
Chapter 4:	Establishment of Protein Delivery Systems targeting Podocytes	53
Chapter 5:	Mimicking Pompe phenotypes for future therapeutic studies: Biodistribution of non-modified siRNA	61
Chapter 6:	Endonucleases induced TRAIL-insensitive apoptosis in ovarian carcinoma cells	77
Chapter 7:	Double targeting restriction endonucleases: towards correction of the acid- α -glucosidase gene in Pompe disease	93
Chapter 8:	Discussion and conclusion	113
Chapter 9:	Summary	129
Chapter 10:	Nederlandse samenvatting	133
Chapter 11:	List of Publications	141
Chapter 12:	Dankwoord	145
Appendix:	Colour figures	151
